## **REASONS FOR ALLOWANCE**

The following is an examiner's statement of reasons for allowance: Fujimura teaches determining the center of the head of a subject and then determining the size of the head of the subject in order to track the head of the subject in a vehicle to determine if the airbag should be deployed. Fujimura also teaches recording an image scenario in the passenger compartment to determine current angles of the head of the occupant with respect to its surroundings. However Fujimura fails to teach the position and center of the head in the ideal direction of movement in a respective current scenario image and then defining current lines of sight of the image acquisition unit as a vector. Fujimura also fails to teach using the apparent size of the head stored in the storage unit at which an absolute sum of a difference between the respective current angle values and any angle was minimal to be an actual size of the head.

Breed teaches a method and apparatus for controlling an airbag that includes determining a current position of a head of an occupant in the passenger compartment, providing an image acquisition unit, and recording an image scenario. However Breed does not teach the position and center of the head in the ideal direction of movement in a respective current scenario image and then defining current lines of sight of the image acquisition unit as a vector. Breed also fails to teach using the apparent size of the head stored in the storage unit at which an absolute sum of a difference between the respective current angle values and any angle was minimal to be an actual size of the head.

The claims have been rejoined because the examiner originally felt it was a

burden to search for using the apparent size of the head stored in the storage unit at which an absolute sum of a difference between the respective current angle values and both 0 degrees and 90 degrees was minimal to be an actual size of the head. Upon the election of one of the two species the examiner could not find any art that determined the absolute sum of a difference between the respective current angle values and any angle was minimal to be an actual size of the head. Therefor the two species have been rejoined because the specific angle is not the limitation that makes this application patentably distinct over prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Luke D. Ratcliffe whose telephone number is 571-272-3110. The examiner can normally be reached on 10:00-5:00 M-Sun.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Thomas Tarcza can be reached on 571-272-6979. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
